# Duct Systems & Component Parts

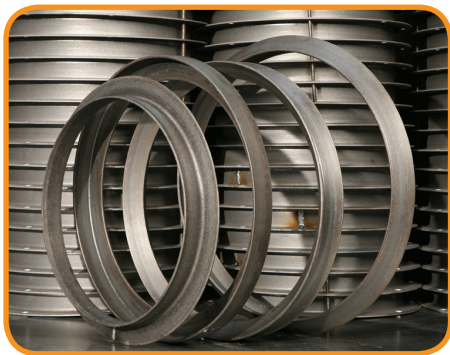

Albina Co., Inc.  
12080 SW Myslonoy St.  
Tualatin, Oregon 97062  
(503) 692-6010  
info@albinaco.com

<https://www.albinaco.com>

Albina can drop ship Clamp Together Ducting and Standard Component Parts direct to your location from our **stock on-hand** or **factory direct**. Your first call for component parts should be to Albina! Whatever we don't stock we can source for you and ship factory direct. Our relationships with the various suppliers allow us to offer discounted pricing due to our special freight and pricing arrangements. Streamline your purchasing/bidding process by calling Albina first. You will always receive the best pricing and lead-times when **contacting Albina directly**.

- Stocked parts are available for immediate shipment which means you can complete your project on time without costly delays.
- We can source non-standard component parts for you or fabricate upon special request.
- All orders can be taken via our on-line ordering system (contact us for your secure login), or by phone or email.
- If you want quality parts, fair pricing, on-time you NEED to contact Albina. We can service ALL of your needs.

## Angle Rings/Angle Flanges

Albina stocks and sells angle flanges that are produced by the factory making more angle rings than any other company in the US!

We can offer a vast range of sizes and materials:

- 3" to 96" diameter flanges
- Carbon Steel (A36)
- Stainless Steel (304 and 316)
- Aluminum
- Hot-dipped galvanized with a coating specification of ASTM A123
- Electro-plated rings (corrosion protection adhering to ASTM B633 type iii)

If you have previously purchased stock angle rings from another source, don't worry. Albina's source can quickly and accurately produce rings that meet the specs' of any other manufacturer. We can match anyone's:

- Material size
- Diameter
- Bolt hole punch pattern

\*Rings stocked in black iron. Custom rings in carbon steel, stainless, aluminum, electro-plated and galvanized available upon request with short lead times. Rolled 4" and 5" flanges available as special order items.

Angle rings 3"-5" are pressed.

Rings that are 6" in diameter and larger, sold by Albina are rolled, not stamped. Stamped rings create a radius at the heel, which causes a gap between the heel and the wall of the pipe and another "V" gap when two rings are placed back to back. With our suppliers 90° angle on perfection, however, you gain these gap-free advantages:

- Less air leakage
- No harbors for germs or debris to build up
- No need to "dress" duct to the ring by pounding with a hammer to eliminate gaps
- Easier vanstoning
- A tougher ring that can withstand more abuse
- No valley for moisture to sit and leak through

Rolled rings perform better and save labor, time and money. Our supplier has perfected punching holes in angle rings and can punch any stock or custom pattern efficiently and with extreme precision including holes on the easy way leg.

## Blast Gates/Cut-Offs

Cast aluminum cut-offs with galvanized steel slide gate. Cut-offs are used to balance systems, or save air, heat and power when a machine is not in use. All cut-offs are furnished with set screws so the blade may be firmly placed for volume control. Stocked sizes include 3" through 14" diameter (half and full). All sizes 2" to 22" diameter (half and full) we can source for you factory direct.

## Plate Flanges

Mild steel, non-pressure rated, flat rings; utilized where piping sections of heavy gauge tube or pipe are connected. Primarily used in Pneumatic Conveying or Chip Conveying Systems. All plate flanges are predrilled for easy alignment and installation. Plate flanges are available in any diameter.

STOCKED ITEMS

Call: (503) 692-6010
